HEALTH STATUS OF PREMATURE INFANTS IN EARLY CHILDHOOD
Mariela Kamburova

Abstract
The aim of the study is a survey of the health status of infants born in 2007 in the University Hospital – Pleven until 3 years of age.

We collected the information for all infants born in 2007 in the University Hospital – Pleven. The significance of the results, findings and conclusions is determined at p <0.05.

Our results confirm the hypothesis that premature children living in urban areas are a risk group with higher morbidity up to 3 years old compared with term infants.

Key words: prematurity, risk group, health status
